SUBJECT: Nadir Determination, Analysis Tasks and Computer Layout

Attached is a bit of analysis extending your work on nadir determination. Hope you find it useful. We welcome specific suggestions which you may have on how can help with other work of this nature. Be assured that the crew here is ready, willing and able and Phil has advised us of all current situations on your end which he has knowledge of, both those "under consideration" and those which are firm.

We have carefully scheduled the analysis tasks, as indicated on the enclosed TI System Analysis Status Sheet. Together with these (2) sheets, I am enclosing typical samples of (2) Task Description Sheets, which we are using here for control purposes. Again, we welcome your comments on any additions to these which might be of assistance to accomplishing the intent of the "Task" at hand. Phil is sending similar data to CFC.

I am also including the latest computer layout, as we see it.

We expect to again be back within the next few days to check the equipments we have shown. This most important layout matter must be resolved to permit firm and definite decisions to insure adequate facilities (air conditioning, power, etc.).
